

JOVANY RAAFAT WAHBA

SYSTEMS & SOFTWARE ENGINEER

Cairo, Egypt · +20 100 822 5833 · jovywahba@gmail.com · linkedin.com/in/jovany-wahba · github.com/jovywahba

SUMMARY

Systems & Software Engineer with a B.Sc. in Computer Science from Nile University and specialised training from the ITI Frontend & Mobile Platform track. I build and operate complete software systems rather than interfaces alone — application front ends, REST APIs and server-side business logic, relational data models, authentication and user roles, third-party integrations, and production deployment on real domains. Recent work spans an internal production booking and operations platform, its public customer-facing counterpart, bilingual clinic management software and two SaaS products, all live in production, built with Next.js, React, Node-based server logic and PostgreSQL via Supabase, and shipped on Vercel and Cloudflare.

SELECTED ENGINEERING PROJECTS

TPP Studios — Internal Production Booking & Operations Platform

studios.tpp.network

Full-Stack Software Engineering

- Engineered a full-stack studio booking and operations platform replacing a manual process: a multi-step flow that assembles a booking dynamically from date and time, guests, studio, equipment and crew, services and delivery requirements, priced by a configurable rules engine covering duration, preparation time, overtime rounding and deposit percentages.
- Built the backend and data layer on Supabase and PostgreSQL, making studios, equipment, extras, talent rooms, post-production packages and pricing configurable as data rather than code, with role-based administration over users, resources, promo codes, booking configuration and booking lifecycle states.
- Integrated the supporting workflows — Google Calendar for scheduling and availability, transactional email for booking and operational notifications, authentication with role-aware permissions, and deployment on Vercel.

Stack: Next.js · React · Node.js · REST API · Supabase · PostgreSQL · Auth & RBAC · Google Calendar API · Resend · Paymob · Vercel

The Studio — Public Studio Booking Platform

the-studio.me

Full-Stack Software Engineering

- Built the public-facing side of the same booking platform, letting external clients configure a studio session — time, studio, equipment, crew, services and file-delivery options — through a dynamic booking journey with an itemised, rule-based price.
- Implemented the customer-facing commercial logic: duration-tier pricing and discounts, conditional security deposits for bring-your-own equipment or crew, VAT-inclusive totals and server-validated promo codes, with catalogue and pricing kept centrally configurable.
- Integrated authentication with identity-based routing that separates staff and customer experiences across hosts, customer booking management, calendar-backed availability, transactional email and Paymob checkout — preserving a customer's in-progress booking across sign-in.

Stack: Next.js · React · Node.js · REST API · Supabase · PostgreSQL · Supabase Auth · Google Calendar API · Resend · Paymob · Vercel

TPP Group — Corporate Media Platform

tppgroup.co

Full-Stack Development

- Built the corporate platform for a media intelligence group operating four business lines and 40+ Arabic content brands: a multi-section routed application covering the group, its platforms, brand portfolio, partners and editorial content.
- Implemented newsletter capture and contact flows backed by a hosted database, served through Cloudflare.

Stack: React · Vite · Supabase · Cloudflare

TPP Intelligence — Audience Analytics Platform

tppintelligence.io

Full-Stack Development

- Built the product platform for an Arabic audience-intelligence tool, fully bilingual across English and a dedicated Arabic locale with RTL layout, including the interactive analytics presentation layer for engagement, content volume and sentiment.
- Implemented the demo-request conversion flow and instrumented the site with Google Tag Manager and GA4.

Stack: Next.js · React · Google Tag Manager · GA4 · Vercel

ClinicPro — Clinic Management SaaS

clinicpro.me

Full-Stack Development

- Built a bilingual Arabic/English clinic management product with full RTL layout and Arabic numerals: appointments, a live patient queue with automatic ticket numbers, patient records and prescriptions, clinic-branded receipts and income tracking.
- Modelled scheduling rules in the database — per-day hours, special dates and blocked breaks — so out-of-hours bookings cannot be created regardless of client.
- Implemented role-based access for doctors and reception staff, internal team messaging, Excel data export, an activity log, and plan gating across a free tier and monthly, annual and lifetime subscriptions.

Stack: Next.js · React · Supabase · PostgreSQL · PostgREST · PostHog · Vercel

The Vow — Wedding Invitation Platform

thevow.life

Full-Stack Development

- Built a digital invitation product around per-guest tracking: each guest receives a unique tokenised link and replies without creating an account, while the host follows attendance from a live RSVP dashboard.
- Implemented plus-one and family responses, invitation open tracking for targeted follow-up, one-tap WhatsApp sharing, and a template engine combining 28 designs with 14 colour themes and 8 font pairings.

Stack: Next.js · React · Vercel

The QR Gate — QR Code SaaS

theqrgate.com

Full-Stack Development

- Built a freemium QR platform supporting 16 code types — URLs, PDFs, vCards, WiFi credentials, menus, coupons and social profiles — through a four-step generator with PNG and SVG export.
- Implemented dynamic hosted codes that resolve through generated mobile landing pages, so a printed code's destination stays editable, with plan gating and scan analytics on the paid tier.

Stack: Next.js · React · Vercel

EXPERIENCE

Cred Development — IT Department Intern

Cairo · Dec 2024 – Jan 2025

- Maintained accurate digital records across users, emails, purchases and bills, and supported data consistency across internal systems.

General Petroleum Company — Intern

Cairo · Aug 2023 – Sep 2023

- Observed cross-department operations and IT systems integration, gaining exposure to data handling in large infrastructures.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript, TypeScript, Next.js, React, Node.js, Express, React Native, Flutter, Dart, HTML5, CSS3, Tailwind CSS, Vite, Bootstrap

Backend & APIs: REST API design, Next.js route handlers, server-side business logic, pricing and booking rules engines, authentication and authorisation, role-based access control

Databases & Data: PostgreSQL, Supabase, PostgREST, Firebase, MongoDB, relational schema design, database-enforced constraints, data export and reporting

Infrastructure & Deployment: Vercel, Cloudflare, domain and DNS configuration, custom-domain routing, environment configuration, Git and GitHub

Integrations: Google Calendar API, transactional email (Resend), payment gateway integration (Paymob), WhatsApp Business links, Google Maps, third-party REST APIs

Product & Analytics: multi-tenant / white-label configuration, subscription and plan gating, admin dashboards and internal tooling, audit logging, PostHog, Google Analytics 4, Google Tag Manager

Practices: Arabic/English bilingual and RTL interfaces, responsive UI, AI-assisted development, debugging and profiling, technical documentation

EDUCATION

TRAINING & CERTIFICATION

Information Technology Institute (ITI)

Frontend & Mobile Platform Track

Intensive course: JavaScript, React, React Native, Flutter, Firebase, testing, UX for mobile, networking fundamentals.

B.Sc. in Computer Science

Nile University — Giza, Egypt

Grade: Good

Graduation project: Recipe Recommendation System (mobile app)

EARLIER PROJECTS

University, ITI and team projects — Enjez services booking platform (web and React Native mobile), React e-learning SPA, e-commerce web and mobile apps, movie app, and a Node/Express social app. Full write-ups at github.com/jovyywahba.
